«Architectes urbanistes associés» office

Cost of the works
€ 31 M excl. vat of which
€ 3,7 M for the structure

Execution
2000 - 2003

ST

Important renovation and extension of a building erected in 1953 and composed of five levels and a basement :

- construction of four car park levels beneath the current building,
- construction of a new building as high as the old one and with five underground levels. Capacity of the building : 100 beds.

Because the institute had to remain fully operational, the use of some very special building techniques was necessary.

Total capacity of the building: 410 beds.

Surface area : 8 100 m².
